Frequently Asked Questions (FAQ)

Q: Your website says, “Zero risk of a ban! (w/ SX OS stealth mode),” what does that mean?

A: This means that even though we are downloading games from CDN, we NEVER put your Switch in danger of a ban, and in fact, you can use the product even if already banned. Please use normal network settings, normal DNS server (NO 9ODNS OR NINTENDO BLOCKERS!), and JUST enable SX OS stealth mode. Stealth mode is 100% reliable without custom DNS.

Q: Can I play online if there is “Zero risk of a ban?”

A: No, we only mean that using our product to install games will not cause a ban. You MUST enable SX OS stealth mode to use StargateNX, and that means that you cannot play online. Nintendo will ban you if you enable WiFi without stealth mode on SX OS! Leave both WiFi and stealth mode enabled!

Q: What do you have planned for future updates?

A: We are going to listen to customer and tester feedback, and fix any bugs brought to our attention. We also have exciting new features that we will announce on the website (like potentially adding support for other CFW besides SX OS)!
